```
Q no. 1: What will be the output of the following code snippet?
def func(a, b):
return b if a == 0 else func(b % a, a)
print(func(30, 75))
Ans: 15
Q no. 2: numbers = (4, 7, 19, 2, 89, 45, 72, 22) sorted_numbers = sorted(numbers) even = lambda a:
a % 2 == 0 even_numbers = filter(even, sorted_numbers) print(type(even_numbers))
Ans: Filter
Q no. 3: As what datatype are the *args stored, when passed into
Tuple
Q no. 4: set1 = {14, 3, 55}
set2 = {82, 49, 62}
set3={99,22,17}
print(len(set1 + set2 + set3))
Ans: Error
Q no. 5: What keyword is used in Python to raise exceptions?
Ans: Raise
Q no. 6: Which of the following modules need to be imported to handle date time computations in
Python?
Ans: datetime
Q no. 7: What will be the output of the following code snippet? print(4**3 + (7 + 5)**(1 + 1))
Ans: 208
Q no. 8: Which of the following functions converts date to corresponding time in Python?
a) strptime
b) strftime
c) both a) and b)
d) None
Ans: None
Q no. 9: The python tuple is _____ in nature.
a) mutable
b) immutable
Ans: Immutable
```

```
B. dump() method
C. load() method
D. None of the mentioned above
Ans: None of the mentioned above
Q no. 15: A text file contains only textual information consisting of ____.
A. Alphabets
B. Numbers
C. Special symbols
D. All of the mentioned above
Ans: All of the mentioned above
Q no. 16: Which Python code could replace the ellipsis (...) below to get the following output? (Select
all that
apply.)
captains = {
"Enterprise": "Picard",
"Voyager": "Janeway",
"Defiant": "Sisko",
}
Enterprise Picard,
Voyager Janeway
Defiant Sisko
a) for ship, captain in captains.items():
print(ship, captain)
b) for ship in captains:
print(ship, captains[ship])
c) for ship in captains:
print(ship, captains)
d) both a and b
Ans: (D) both a and b
Q no. 17: Which of the following lines of code will create an empty dictionary named captains?
a) captains = {dict}
b) type(captains)
```

```
c) captains.dict()
d) captains = {}
Ans: (D) captains = {}
Q no. 18:
Now you have your empty dictionary named captains. It's time to add some data!
Specifically, you want to add the key-value pairs "Enterprise": "Picard", "Voyager": "Janeway",
and "Defiant": "Sisko".
Which of the following code snippets will successfully add these key-value pairs to the
existing captains dictionary?
a) captains{"Enterprise" = "Picard"}
captains{"Voyager" = "Janeway"}
captains{"Defiant" = "Sisko"}
b) captains["Enterprise"] = "Picard"
captains["Voyager"] = "Janeway"
captains["Defiant"] = "Sisko"
c) captains = {
"Enterprise": "Picard",
"Voyager": "Janeway",
"Defiant": "Sisko",
}
d) None of the above
Ans: B is the correct answer
Q no. 19:
You're really building out the Federation Starfleet now! Here's what you have:
captains = {
"Enterprise": "Picard",
"Voyager": "Janeway",
"Defiant": "Sisko",
"Discovery": "unknown",
}Now, say you want to display the ship and captain names contained in the dictionary, but you also
want to provide some additional context. How could you do it?
```

```
a) for item in captains.items():
print(f"The [ship] is captained by [captain].")
b) for ship, captain in captains.items():
print(f"The {ship} is captained by {captain}.")
c) for captain, ship in captains.items():
print(f"The {ship} is captained by {captain}.")
d) All are correct
Ans: B is the correct answer
Q no. 20:
You've created a dictionary, added data, checked for the existence of keys, and iterated over it with
a for loop. Now you're ready to delete a key from this dictionary:
captains = {
"Enterprise": "Picard",
"Voyager": "Janeway",
"Defiant": "Sisko",
"Discovery": "unknown",
}
What statement will remove the entry for the key "Discovery"?
a) del captains
b) captains.remove()
c) del captains["Discovery"]
d) captains["Discovery"].pop()
Ans: Answer is C
```
